

PLEATED PAPER OF *the* FUTURE

Filter-Mart
element part #
01-0028

Advantages of the NEW design

More filter means that it removes more contaminants and has a higher flow rate capability. A stronger outer jacket allows for rougher handling, reverse flow capability, and less damage in shipping. Designed for heavy duty applications. Longer life cycle equals less down time. More filter media – up to 30% more media than a standard 6" x 18".

Applications

Hydraulic oil, lubricating oil, fuel oil, quench oil, gear oil, coolant, EDM oil, solvents, and many more. The micron range available is 1/2 to 100 micron. We have many different inner diameter endcaps in stock for a variety of applications. We also custom make elements to meet your special requirements.

PLEATED PAPER OF *the* FUTURE

ADVANTAGES OF THE **NEW DESIGN**

- Higher Flow Rate Capability**
- Much Stronger Construction**
- Reverse Flow Capability**
- Less Damage in Shipping**
- Heavier Outer Jacket**
- Longer Life Cycles**
- Less Down Time**
- More Filter Media**

We believe you will be very happy with our newly designed 6"x18" filter elements. Typical applications include: hydraulic oil, lubricating oil, fuel oil, quench oil, gear oil, coolant, EDM oil, solvents and many, many more. The micron range available is 1/2 to 100 micron. We have many different inner diameter endcaps in stock, for a variety of applications. We also custom make elements to meet your special requirements.
